

WEEK 1 • STUDENT ACTIVITY

The Agent Hunt

Find an AI agent hiding in your daily life — and map exactly how it thinks.

Name: _____ Class: _____ Date: _____

Instructions

Choose a technology you use regularly — a recommendation engine, a voice assistant, a navigation app, a tutoring tool, a customer service chatbot, or anything that feels "smart." Fill in the Agent Profile below as completely as you can. You do not need to know how the technology works — think about what you observe it doing.

Your Agent Profile

1. Name of the Technology / Product

e.g. Spotify, Google Maps, Netflix...

2. What goal does the AI pursue?

What is it trying to achieve for you or for the company?

The Reasoning Loop

THINK What does the AI reason about before taking action?	ACT What action does it take?	OBSERVE How does it learn from the result?

3. Is it fully autonomous, or does a human stay in the loop?

Give an example of when it acts on its own vs. when it asks you.

4. One way this agent could fail or cause harm:

Think about what happens when it's wrong or when someone misuses it.

Reflection

After completing your Agent Profile, answer this question in 2–3 sentences:

Would you trust this agent to make decisions for you without asking for confirmation? Why or why not?
